                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     seq_name: /SIDS1/gcgdata/geneseq/geneseqn-emb1/NA1998.DAT:AAV23659
                                                                                                                              and recombinant vectors are claimed. Also claimed are isolated nucleic acid molecules encoding epitope-bearing portions (see AAW53988-915) of ILL-R ACM. Recombinant ILL-R ACM can be used to identify IL-IR agonists and antagonists useful for therapeutic modulation of IL-1 activity, and to raise specific antibodies. Nucleic acid fragments are useful as diagnostic probes and primers, for isolation of IL1-R ACM-encoding genomic sequences, for in situ hybridisation to determine chromosomal localisation of the gene, for thromasoma identification and for identification and for the gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            This cDNA clone codes for human interleukin-1 receptor accessory molecule (ILI-R AcM) (see AAW53897), a new member of the immunoglobulin superfamily that forms a complex with type 1 ILI-R and which has higher affinity for IL-1 than the receptor itself, suggesting that the known high and low affinity forms of ILI-R are in fact the receptor with or without ILI-R AcM, respectively. The 2155 bp sequence is present in clone HMEEJ52 (deposited as ATCC 97666) derived from microvascular epithelium (no details of
                                                                                                                                                                                                                                                                                                                                                                                                    isolation given). Recombinant expression in Escherichia coli, mammalian and insect cells is described. Recombinant host cells
                                                                                might be linked to disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 2; Fig 1; 95pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   used for therapeutic modulation of IL-1 activity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         284 leAspGlyLysLysProAspAspIleThrIleAspValThrIleAsnGlu 300
             This sequence encodes fusion polypeptide 569, which is capable of binding cytokine IL-1 to form a non-functional complex. The invention concerns production of antagonists to any cytokine that utilizes an alpha specificity determining component, which when combined with the cytokine, binds to a first beta signal transducing component to form a non-functional intermediate which then binds to a second beta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IL-1 trap; cytokine; antagonist; CNTF; receptor; fusion protein;

The CC receptor components are shared by cytokines such as the CMTF (ciliary CC neurotrophic factor) family of cytokines. The invention provides the CC basis for the development of IL-6 antagonists, as they show that if, in CC consisting of the ligand, a non-functional intermediate complex. CC consisting of the ligand, it will effectively block the action of the ligand. Effective antagonists of IL-6 or CNTF consist of heterodimers CC ligand. Effective antagonists of IL-6 or CNTF consist of heterodimers CC ligand. Effective antagonists of IL-6 or CNTF consist of heterodimers CC components of their receptors and the extracellular domain of gp130. CC the extracellular domains of the alpha specificity determining CC representation forms of their receptor. The nucleic acids and CC consist as a setoporosis and primary and secondary effects of CC cancer including multiple myeloma or cachexia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Percent Similarity: 100.000

It was obtd. by PCR amplification (see also AAT32029-30) of cDNA (AAT32026) coding for extracellular domain of IL-1R AcP (AAW01911). The soluble protein was expressed in Sf9 insect cells using a baculovirus system. It can be used to treat or prevent the inflammatory or immunological activities of IL-1, and also to screen for IL-1 antagonists.

It was obtd. from a human YT cell cDNA library using a probe derived from a human partial genomic clone. The cDNA can be used for the prodn. of pure IL-1R AcP by expression in a host cell. The IL-1R AcP is used to treat or prevent the inflammatory or immunological activities of IL-1.

It was obtd. by screening cell-surface proteins in COS-7 cells transfected by 3T3-L1 cDNA using anti-murine IL-1R ACP monoclonal antibody 4C5, and isolation of cDNA clones from positive lines. The murine CDNA was used to obtain a partial genomic clone of the human homologue. A probe derived from this genomic clone was then used to isolate the full-length cDNA (AAT32026) for human IL-1R ACP (AAW01911).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    from human HeLa cells. The SEMPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 287 BP; 76 A; 78 C; 68 G; 65 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                          This sequence encodes a interleukin-1 (IL-1) receptor-like polypeptide, designated IL-1 receptor DNAX designation 8 (IL-1RDB), of the invention. The IL-IRDB, IL-1RDB, and IL-1RDD10 proteins, their fragments and muteins, also related antibodies, other binding agents and (ant)agonists are used to treat conditions associated with abnormal expression of the polypeptide or abnormal expression of, or response to, their ligands, e.g. immunological, inflammatory or morphological disorders. They may also be used to screen for binding agents (potential drugs), diagnostic reagents (to detect the proteins or their ligands) and to isolate related sequences. Antibodies may also be used to raise anti-idiotypic antibodies, as carriers for toxins, radionuclides or other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        203 GAACCGCATTAGTAAGGAGAAAGATGTGCTGTGGTTCCGGCCCCACTCTCC 252

This sequence encodes a interleukin-1 (IL-1) receptor-like polypeptide, designated IL-1 receptor DNAX designation 8 (IL-1RD8), of the invention. The IL-1RD8, IL-1RD9, and IL-1RD10 proteins, their fragments and mutteins, also related antibodies, other binding agents and (ant)agonists are used to treat conditions associated with abnormal expression of the polypeptide or abnormal expression of, or response to, their ligands, e.g. immunological, inflammatory or morphological disorders. They may also be used to screen for binding agents (potential drugs), diagnostic reagents (to detect the proteins or their ligands) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1041 TAAAAAG

Sense and antisense oligonucleotides derived from the TIGIRR coding sequence can be used to inhibit expression of the TIGIRR gene. The TIGIRR protein, or its soluble fragments, are used: (i) to study cellular processes (immune regulation, proliferation, death, migration, interaction with other cells and inflammation); (ii) to identify and purify proteins that associate with TIGIRR ligands and receptors, and to measure their biological activity; (iii) in screening for, and rational design of, potential inhibitors of activity; (iv) therapeutically against diseases mediated by TIGIRR polypeptide counter structures; (v) as molecular weight markers in electrophoresis; (vi) for determining isoelectric points of unknown
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (b) to identify human chromosome X, to map genes on this chromosome and to identify disease-related genes (particularly in the region Xq21.3-22 where genes are present associated with e.g. FG syndrome, premature ovarian failure-1, leiomyomatosis, epilepsy, Bazex syndrome etc.) including detection of defective genes; (c) to study cell-signal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proteins; (vii) as controls for determining the extent of protein fragmentation (e.g. to aid characterisation of protein structures by ma spectrometry); (viii) for generation of antibodies (Ab); and (ix) to deliver diagnostic or therapeutic agents to cells that express TIGIRR binding molecules. Ab are used for affinity purification of TIGIRR; therapeutically to inhibit binding of TIGIRR to its counter structures, and (if agonistic) to promote cell signalling.
                                                                                                                                                                                                                                                                                              107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence encodes the human TIGIRR protein of the invention. The TIGIRR DNA sequences can be used: (a) as probes or primers for identifying nucleic acid that encodes proteins with TIGIRR activity:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of the coding region of cDNA encoding chuman Xrec2, a member of the interleukin-1 (II-1) receptor family that is encoded by a gene on the X chromosome. The sequence was cobtained by high-throughput sequencing of chromosome region xpl1, corrected and isolated II-1 zeta, II-1 zeta splice variants and Xrec2 polypeptides (see AAY95297-301), the nucleic acids (see Xrec2 polypeptides (see AAY95297-301), the nucleic acids (see AAAZ7918-22) encoding such polypeptides, processes for production of recombinant forms of such polypeptides, and their uses. Xrec2 nucleic acids are used to: to express Xrec2 polypeptides; as probes to identify nucleic acids encoding proteins of the II-1 receptor family; to identify human chromosome X; to map genes on chromosome X; to identify genes associated with diseases, syndromes, or other conditions associated with chromosome X, such as retinoschisis, issencephaly, subcortical laminalheteropia, mental retardation, rowchock syndromes, broaverence heresteria, mental retardation,

                                                                                                     The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny inhibin activity and may be useful in the diagnosis and/or activiny inhibin activity and may be useful in the diagnosis and/or

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABA08225-ABA09574 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the novel polypeptides, antibodies against the polypeptides, methods of detecting the nucleotides or polypeptides in a sample, and methods of identifying compounds which bind to polypeptides of the invention. Although novel, many of the polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence potential therapeutic applications. The polypeptides of the invention may have various activities, including cytokine, cell proliferation or cell

Polypeptides involved with tissue regeneration and CC repair (or nucleic acids encoding them) may be used to promote wound CC healing (e.g., of burns, incisions and ulcers), while those with CC immunomodulatory activities may be used in the treatment of viral, CC bacterial and fungal infections in addition to immune disorders. CC Polypeptides with growth factor activity may be used in cell cultures to CC promote cell growth. For example, such polypeptides may be used to augment or replace cells damaged by illness, CC antoimmune disease or accidental damage. The polypeptides and nucleotides may also be used in the diagnosis of the above conditions, and in drug CC screening techniques. The presents a cDNA encoding a cover burner of the above conditions.

Depending on their biological activities, polypeptides and nucleotides of the invention are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Such conditions include cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  differentiation activities; stem cell growth factor activity; haematopoiesis regulatory activity; tissue growth activity; immunomodulatory activity; activin- or inhibin-related activities; chemotactic or chemokinetic activities; haemostatic, thrombotic or

The polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, haematopolesis regulating activity, tissue growth factor activity, haematopolesis and/or activity/Inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and in the manual content of cancer leukaemia, nervous system disorders, arthritis and the content of the conten

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cervical cancer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Probe #5216 for gene expression analysis in human cervical cell sample.
